

Getting hands-on with minimising our environmental impact

Our Biogel® gloves are made to deliver impact where it matters: high impact on hand performance and low impact for the environment. Here are five ways we are hands-on with achieving our sustainable aims.

02

Recyclability

The inner wrap, dispenser boxes, and shipping boxes of the Biogel surgical gloves are all recyclable. The Biogel double gloving packs also reduce customers' plastic packaging waste by 50%, compared to the Biogel single gloving packs.

Did you know:

Zero manufacturing waste goes to landfill.

03

Manufacturing

All Biogel glove factories are ISO 14001 certified international standard for environment management system – ensuring continual improvement in environmental management through more efficient use of resources and waste reduction.

04

Printing

We have replaced the solvent-based ink with a water-based alternative for printing on our packaging.

05

CO₂ emissions

We are committed to reducing greenhouse gas emissions. Therefore, we use solar energy in our glove-packing factory (photo above). There are similar plans for our manufacturing facilities.

01

Sourcing

We only source natural rubber and synthetic latex from certified suppliers (ISO 14001) to produce the Biogel gloves.
