

External links for Wound Infections and Biofilm

Here are some external links to specific documents produced together/ or by our partner associations and industry peers.

Wounds International 2022:

[Wound Infection in Clinical Practice 2022, authored by the International Wound Infection Institute \(IWII\) Committee.](#)

This edition authored by the International Wound Infection Institute (IWII) Committee, is an update from our previous consensus document published in 2016. Advances in research and clinical practice relating to the wound environment, risk factors for infection, biofilm, antimicrobial resistance, and new technologies for identification and management of wound infection have been incorporated into this update.

Wounds International, World Union of Wound Healing Societies (WUWHS) 2016:

[Position document: Management of biofilm.](#)

Antimicrobial and multi-drug resistance loom large on the global healthcare landscape, in particular in the treatment of chronic, hard-to-heal wounds where current figures put the presence of biofilm in 60%–100% of non-healing wounds.
